Quadratic Angry Birds: The Game - GeoGebra

Using Angry Birds as a Context for Quadratic functions. One of the teachers I work with used Angry Birds as a context for learning about quadratic functions. Whenever they wanted to introduce a new topic, they referred back to the context of Angry Birds so as to give students a representation of quadratics with which the students may be familiar. Let's see what that could look like.

Using Angry Birds as a Context for Quadratic functions ...

Angry Bird 3 is the only one with a vertex in its graph, so it is best to move forward with that screenshot and overlaid grid. Students may try a variety of strategies including reflecting one side of the parabola over to the other or wanting to use Algebra.

"angry" unit. Using the coordinates (20.2, 4.8) for the vertex and (0, 0) for the point on the curve, we determine the quadratic function for the Angry Parabola in figure 2. We first substitute the origin into the vertex form of the quadratic function to obtain $0 = a(0 - 20.2)^2 + 4.8$ and then find that $a = -0.0118$.

Vector properties and the birds' frictionless environment ...

In this activity, the bird and target are both located on the x-axis, which form the roots of the quadratic curve. This means that the curve can be described as: $y = (x-r1)(x-r2)$, where r1 and r2 are the roots of the curve. In the screenshot example below, the roots are -1 an 4. This means that the quadratic curve expression can be expressed as:
