Biology Cell

In interphase a cell has copied its DNA, so the chromosomes in the nucleus each consist of two connected copies, called sister chromatids.

You can't see the chromosomes very clearly at this point, because they are still in their long, stringy, decondensed form. This animal cell has also made a copy of its centrosome,

Biology Study Guides - SparkNotes

We will be discussing two different types of cell reproduction--mitosis and meiosis. These processes are responsible for creating two different types of cells. Mitosis is a process that creates a nearly exact copy of the original cell. Somatic cells, which include

Read Online

Biology Cell

nearly all human cells, are created by this process.

Meiosis is a different form of reproduction that leads to the production of germ cells, or sex cells.

Reproduction
Trilogy - BBC ...

As its name suggests, the main goal of cellular reproduction is to

"reproduce" a copy of an existing cell. This process needs to be

accomplished in such a way as to faithfully copy a cell's contents and then divide it such that each resulting cell contains the appropriate, similar cellular components.
