Modern architectures that support evolution must accommodate all these important dimensions of architecture--continuously. When building an evolutionary architecture, architects must consider each dimension affected. For example, it isn't useful to build an evolvable technical architecture with an intractable data schema, or evolve in a way that harms security. Fitness Functions

Evolutionary architectures are built one part at a time, with many different increments. Speed to the next increment is key. Fitness Functions. Every system at different points of their life need to optimise to be "fit" for its environment. Evolutionary architectures make it explicit what "fit" means with as much automation as possible.

Building Evolutionary Architectures [Book]

The timely "Building Evolutionary Architectures" sits at the intersection of two key trends in the software industry. At one hand software engineers face increasing demand for delivery and quality at 'Internet' pace and scale. The only way to address this is to build evolving architectures. We do not have all the answers at the beginning, nor do we have time to find all the answers.

An evolutionary architecture supports incremental, guided change as a 1st principle across multiple dimensions.

Building Evolutionary Architectures - Neal Ford

This book gives a high level overview of building evolutionary architectures. An evolutionary architecture supports guided, incremental change across multiple dimensions. Changes are guided by fitness functions that check if the most important architectural characteristics are on target. Examples vary from coding standards to performance, security.

Building Evolutionary Architectures - PDF eBook Free Download

An evolutionary architecture supports building systems that allow architects and developers to make sweeping changes to the most important parts of their systems with confidence. It covers practices that allow developers to build continual architectures, which evolve cleanly without the need for a crystal ball. Our Definition:

Building evolutionary architectures: support constant ...

To build architectures that truly evolve, architects must support genuine change, not jury-rigged solutions. Going back to our biological metaphor, evolutionary is about the process of having a system that is fit for purpose and can survive the ever-changing environment in which it operates.
