To find the confidence interval from this, look up the confidence level you want to calculate the interval for in a Z-score table and multiply this value by the Z score. For a 95 percent confidence level, the Z-score is 1.96. Using the example, this means: $\text{Mean} \pm Z \times \text{SE} = 180 \text{ pounds} \pm 1.96 \times 0.95 = 180 \pm 1.86 \text{ pounds}$
