Computer Science is the study of computers and computational systems. It is the scientific and practical approach to computation and its applications. The more you know the theories of this field, the better programmer you become. As a result, you write more efficient codes which helps to run a program faster using less computer resources.

When a computer is performing the tasks that a program tells it to do, we say that the com-puter is running or executing the program. The central processing unit, or CPU, is the part of a computer that actually runs programs. The CPU is the most important component in a computer because without it, the computer could not run software.

In computer programming, a variable is a storage location and an associated symbolic name which contains some known or unknown quantity or information, a value. Okay, well, that's kind of cryptic. To me, a variable is simply a way to store some sort of information for later use, and we can retrieve this information by referring to a "word" that will describe this information.
