An object is an instance of a class. Just the same as declaring a variable, for example Var I : Integer; I is the instance of datatype integer. In other words, the class is the receipt and the object is the cake. In Delphi a Class always start with the capital letter T. (this is a convention) var car : TVehicle; Car is the object.

Object Ori ę nted Programming with Delphi [English]

In Object Oriented Programming (OOP), you write programs that manipulate objects. An object is a combination of data and program code; it is created from a class (a kind of template, blueprint). You could think of "dog" as a class and your particular dog as an object, an instance of the class "dog". Delphi's VCL (Visual Component Library) is a collection of classes to create objects such as forms, tables, queries, radio buttons, check boxes, etc.

OOP in Delphi - Object - Class

Objects also allowed events, such as mouse clicks, to be handled neatly - a button object could call a routine (method) of another object when clicked. This was now true modularisation. The basic parts of an object oriented program: The basic building block of an Object Oreinted (OO) program is a Class. It defines data (now called fields) and ...
