Read Book Electronic Health Records Understanding And Using Computerized

There is an important distinction between an EHR and an electronic medical record (EMR): An EMR is the record that is created and maintained in a single provider's office. The EHR is a comprehensive patient history; it can be based on a doctor's EMRs, but it is the EHR that travels with the patient to all providers involved in that patient's care and that is used by multiple health care organizations.

Understanding Electronic Health Records | The Daily Dose ...

An electronic health record (EHR) is a digital version of a patient's paper chart. EHRs are real-time, patient-centered records that make information available instantly and securely to authorized users.

While an EHR does contain the medical and treatment histories of patients, an EHR system is built to go beyond standard clinical data

Understanding Electronic Health Records, the HIPAA Security Rule, and Cybersecurity. To support patient care, providers store electronic Protected Health Information (ePHI) in a variety of electronic systems, not just Electronic Health Records (EHRs). Knowing this, providers must remember that all electronic systems are vulnerable to cyber-attacks and must consider in their security efforts all of their systems and technologies that maintain ePHI.

Read Book Electronic Health Records Understanding And Using Computerized

Defining Electronic Health Records. According to the Centers for Medicare & Medicaid Services, an electronic health record is an electronic version of a patient's medical history — that is maintained by the provider over time, and may include all of the key administrative clinical data relevant to that person's care under a particular provider. Information in an EHR could include the history of prescriptions a patient has taken, records of medical treatments, and data regarding ...
