Industrial ventilation generally involves the use of supply and exhaust ventilation to control emissions, exposures, and chemical hazards in the workplace. Traditionally, nonindustrial ventilation systems commonly known as heating, ventilating, and air-conditioning (HVAC) systems were built to control temperature, humidity, and odors.

Manual of ... Recommended Practice For

There are two types of mechanical ventilation systems used in industrial settings: Dilution (or general) ventilation reduces the concentration of the contaminant by mixing the contaminated air with clean, uncontaminated air. Local exhaust ventilation captures contaminates at or very near the source and exhausts them outside.
