Because PNA–DNA hybrids are much more stable than DNA–DNA hybrids, we anticipated that within the living cell, the PNA probe would selectively and competitively form a heteroduplex with telomeric DNA. To introduce the PNA probe into living U2OS cells we made use

PROBLEMS OF CULTIVATION OF  
MAMMALIAN CELLS IN

FERMENTORS. In the past few decades

# Where To Download Mammalian Cells Probes

there have been great interests in the cultivation of mammalian cells, including human cells in fermentors for the production of biologics for diagnostic and therapeutics used in human health care.

This is not a new direction in the progression of fermentation technology but a natural anticipated progress in the

# Where To Download Mammalian Cells Probes field of fermentation technology.

## PROBLEMS OF CULTIVATION OF MAMMALIAN CELLS IN FERMENTORS

These compounds were designed based on structural similarity to fluorinated hydrophobic rhodol fluorophores 12 that

In this study, by using two SM<sup>2</sup>binding probes, lysenin and Eq<sup>2</sup>II, we examined the subcellular localization of SM in COS<sup>2</sup>1 cells. The specificity of these probes toward SM in vivo was verified by several approaches that include SMS knockdown, SMase treatment, and

Wortmannin is a specific inhibitor of the  
phosphatidylinositol (PI) 3-kinase that has  
been shown to block endocytosis in  
mammalian cells. 27 It also has been

# Where To Download Mammalian Cells Probes

shown to be active in plant cells, where it inhibits protein sorting to the vacuole through action on both the PI 3- and PI 4-kinases. 28 In the cells treated with Wortmannin, the signal of 2 was detected, whereas the signal of 1 was faintly observed (Fig. 4b and Fig. S13, ESI†).
