Neuroergonomics: The brain at work - Oxford Scholarship

Neuroergonomics can be defined as the study of brain and behavior at work. It combines two disciplines--neuroscience, the study of brain function, and human factors, the study of how to match technology with the capabilities and limitations of people so they can work effectively and safely. The goal of merging these two fields is to use the startling discoveries of human brain and physiological functioning both to inform the design of technologies in the workplace and home, and to provide ...

Neuroergonomics: The Brain at Work and in Everyday Life

Neuroergonomics, as the study of the brain at work and during everyday tasks, uses neuroscientific methods to better understand the user during interaction with a technical system. Performance measures provide only limited insights into cognitive processes at the end of the task when a response is given.

Neuroergonomics: The brain at work — Research Nebraska

Neuroergonomics is motivated to effectively apply state-of-the-art methods and theories from neuroscience to understand how the brain works in everyday life. Conversely, findings obtained in work-defined settings inform and challenge our understanding of what work means in terms of neural mechanisms.
