The planets of the solar system include Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune. Pluto was previously thought of as a planet. It is now thought of as a dwarf planet. It sits in the Kuiper belt, which includes comets, dust and other dwarf planets. The Kuiper belt lies on the edge of the solar system. The moon is made of rock. Since the beginning of mankind, people have watched and studied it.

## **Solar System Facts for Kids**

The biggest planet in our solar system . explore; What Is the Weather Like on Other Planets? Each of the planets in our solar system experiences its own unique weather. explore; Is There Ice on Other Planets? Yes, there is ice beyond Earth! In fact, ice can be found on several planets and moons in our solar system.

## **Solar System | NASA Space Place – NASA Science for Kids**

This is where we call “home.” The solar system is made up of some major and minor players, all of which interact with each other. The solar system consists of our sun, which is a star, and all that its gravity affects. The planets in our solar system are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune.

# Download Ebook Solar System For Kids The Planets And Their Moons Universe For Kids Children Astronomy Space Books

Many kids think of the planets in the Solar System as being somewhat close to each other. One effective way to get them to understand the massive distances involved in the Solar System is to build a model in which the distances between the planets are to scale. This particular Solar System model will require at least 30 feet of space.

The Solar System is made up of the Sun and all of the smaller objects that move around it. Apart from the Sun, the largest members of the Solar System are the eight major planets. Nearest the Sun are four fairly small, rocky planets - Mercury, Venus, Earth and Mars. Beyond Mars is the asteroid belt – a region populated by millions of rocky objects.

## **ESA - Space for Kids - The Solar System and its planets**

The solar system consists of the Sun and everything that orbits, or travels around, the Sun. This includes the eight planets and their moons, dwarf planets, and countless asteroids, comets, and other small, icy objects. However, even with all these things, most of the solar system is empty space. The solar system itself is only a small
