Published Dec 18, 2013 Updated Feb 23, 2016. Tar sands (also known as oil sands) are a mixture of mostly sand, clay, water, and a thick, molasses-like substance called bitumen. Bitumen is made of hydrocarbons—the same molecules in liquid oil—and is used to produce gasoline and other petroleum products. Extracting bitumen from tar sands—and refining it into products like gasoline—is significantly costlier and more difficult than extracting and refining liquid oil.

What Are Tar Sands? | Union of Concerned Scientists

Tar Sands documents the economic and environmental inefficiency of transforming tar into oil with today's technology; then it documents the role the tar sands play in transforming a progressive, tolerant and prosperous country into a petro-state that both relies on and supports continued exploitation.
